Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/896,238

Applicant(s)

GRUNE ET AL.

Examiner

DIANE MIZRAHI

Art Unit

2617

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 November 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 12-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 12-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 14 November 2008 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/C)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____
- Paper No(s)/Mail Date 11-15-08

DETAILED ACTION

This action is responsive to the Amendment filed November 15, 2008.

Claims 12-22 are pending in this Application. Applicant has canceled claims 1-11.

Drawings

The drawings are objected to because the figures are difficult to read because of the shading within the text. For example, in Figure 6, the shading does not permit for reading of the text. All drawing should be corrected. The subject matter is difficult to read. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and

Art Unit: 2617

informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The objection to Figure 6 as being new matter is withdrawn.

Request for Continued Examination Under 37 CFR 1.114

This is in response to request for amendments filed November 14, 2008 Continued Examination Under 37 CFR .1.114.

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's Request for Continued Examination (RCE) submission and its accompanying amendment filed on November 14, 2008 has been entered.

Claim Objections

Claims 12-22 are objected to because of the following informalities: intended use statements. The use of the word "for" before a verb (i.e. storing,

Art Unit: 2617

retrieving, searching or for evaluation) creates an intended use statement that has no function. These claims should be reworded using terms that require the element or potential functional limitation. Appropriate correction is required.

Claims 12-10 recite the limitation "wherein".

MPEP 2106 (II C) states "the subject matter of a properly construed claim is defined by the terms that limit its scope. It is this subject matter that must be examined. As a general matter, the grammar and intended meaning of terms used in a claim will dictate whether the language limits the claim scope. Language *that suggests* *or makes optional* but does not require steps to be performed or does not limit a claim to a particular structure does not limit the scope of a claim or claim language. The following examples of language that may raise a question as to limiting effect of the language in a claim:

- A. statements of intended use of field or use,
- B. "adapted to" or "adapted for" clauses,
- C. "wherein" clauses,
- D. "whereby" clauses.

This list of examples is not intended to be exhaustive. See also MPEP 2111.04." Since "wherein" suggest or make optional the limitations following the claim language, Applicant is hereby advised that these limitations may not be given weight in future office actions.

The determination of whether each of these clauses is a limitation in a claim depends on the specific facts of the case. in *Hoffer v. Microsoft Corp.*, 405 F.3d 1326, 1329, 74 USPQ2d 1481, 1483 (Fed. Cir. 2005), the court held that

Art Unit: 2617

when a "whereby" clause states a condition that is material to patentability, it cannot be ignored in order to change the substance of the invention." id.

However, the court noted (quoting *Minton v. Nat 'l Ass 'n of Securities Dealers, Inc.*, 336 F.3d 1373, 1381, 67 USPQ2d 1614, 1620 (Fed. Cir. 2003)) that a "whereby clause in a method claim is not given weight when it simply expresses the intended result of a process step positively recited," Id. See MPEP 211 t.03 17.

Specification

The specification is objected to for failing to provide proper antecedent basis for the claimed subject matter of claims 12-22. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o).

Claims 12-22 the originally filed specification recites "**model mapping**". There is no mention of either a "model mapping " in the specification (November 14, 2008).

Appropriate action is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 12-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Examiner is unclear as to what is Applicant's claimed, "model mapping".

Examiner is unclear as to what is meant by the following claimed limitations:

- (1) "*minimally a plurality of patents*" (Claim 20, (1)) for example and "*a meaningful manner*";
- (2) "optionally simultaneous" (Claims 14-15);
- (3) "simultaneous and optionally" (Claim 15);
- (4) "simpler combination" (Claim 15);
- (5) "near instantaneous" (Claim 17);
- (6) "instantaneous" (Claim 13);
- (7) "meaningful manner" (Claim 20);
- (8) "minimally problem solving solutions and optionally" (Claim 21);
- (9) "minimally valuation solutions" (Claim 22);
- (10) "causing" (Claims 20-22). What is this meant by "causing"?

All claims should be reviewed. Further clarification and explanation is required.

Examiner does not understand what Applicant intends these limitations to mean, thereby rendering the Application difficult to further examine.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 20-22 are rejected under 35 U.S.C. 101 because the claimed invention is directed non-statutory subject matter.

The claims 20-22 are rejected under 35 U.S.C. 101 based on Supreme Court precedent, and recent Federal Circuit decisions, the Office's guidance to examiners is that a § 101 process must (1) be tied to another statutory class (such as a particular apparatus) or (2) transform underlying subject matter (such as an article or materials) to a different state or thing. *Diamond v. Diehr*, 450 U.S. 175, 184 (1981); *Parker v. Flook*, 437 U.S. 584, 588 n.9 (1978); *Gottschalk v. Benson*, 409 U.S. 63, 70 (1972); *Cochrane v. Deener*, 94 U.S. 780,787-88 (1876).

An example of a method claim that would not qualify as a statutory process would be a claim that recited purely mental steps. Thus, to qualify as a § 101 statutory process, the claim should positively recite the other statutory class (the thing or product) to which it is tied, for example by identifying the apparatus that accomplishes the method steps, or positively recite the subject matter that is being transformed, for example by identifying the material that is being changed to a different state. Here, applicant's method steps, fail the first prong of the new Federal Circuit decision since they are not

Art Unit: 2617

tied to another statutory class or do not change or switch statutory class (such as a particular apparatus) or do not transform the underlying subject matter (such as an article or materials) to a different state or thing. Therefore, the claims are related to mental processes, which is not patentable, and can be preformed without the use of a particular apparatus.

Thus, claims 20-22 are non-statutory and rejected under 35 USC § 101 since they may be performed within the human mind.

Computer software is not a process, a machine, a manufacture or a composition of matter. Accordingly, Claims 20-22 fails to recite statutory subject matter, as defined in 35 U.S.C. 101. Claims 20-22 "method claims" are directed toward non-statutory subject matter.

(In re Bilski, Appeal No. 2007-1130; and in conjunction with the Interim Guidelines (see MPEP 2106.IV.B: Determine Whether the Claimed Invention Falls Within An Enumerated Statutory Category); Based on Supreme Court precedent [Diamond v. Diehr, 450 U.S. 175,184 (1981); Parker v. Flook, 437 U.S. 584,588 n.9; Gottschalk v. Benson, 409 U.S. 63,70 (1972); Cochrane v. Deener, 94 U.S. 780,787-88 (1876)]; and recent Federal Circuit decisions [Gottschalk v. Benson, 409 U.S. 63,70 (1972)] regarding 35 USC 101 in which a process must be (1) tied to another statutory class (such as a particular apparatus) or (2) transform underlying subject matter (such as an article or materials) to a different state or thing.)

Claim Rejections - 35 USC 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of

Art Unit: 2617

35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 12, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable Rivette et al., US Patent No. 6499026 B1 and Rivette hereinafter) in view of Kevin W. Boyack et al. (Paper entitled, "Analysis of Patent Databases Using VxInsight", March 29, 2001, published by Sandia National Laboratories and referred as Boyack hereinafter).

Regarding Claim 12, Rivette discloses a computer system for enabling a simultaneous (i.e. simultaneously) (Rivette, Col 26, line 6) and (i.e. enables the computer control logic to execute programs to perform functions) (Rivette, Col 16, lines 5-13) combination of techniques including intelligent searching for problem solving with (i.e. intelligent agents) (Rivette, Col 24, line 41) (*Examiner notes that an intelligent agent is used for intelligent actors which observe and act upon an environment, in the sense of a rational agent, an entity that is capable of perception, action and goal directed behavior. Such an agent might be a robot or an embedded real time software system - and is intelligent if it interacts with its environment in a manner that would normally be regarded as intelligent if that interaction were carried out by a human being. Also, an intelligent agent might be wholly autonomous, carrying out its own agenda, and acting as an agent for no one.*), and valuation of intellectual property (i.e. patent's value) (Rivette, Col 11,

line 66) , while regarding said intellectual property in a meaningful manner with a user interface device (Figure 9, item 902, item 906)(Figure 4, item 420) (i.e. document identification of patents such as document number, title, application type, figures) (Figure 12H, item 1222), said computer system (Figure 40, item 57, computer) comprising;

at least one server computer (i.e. enterprise server) (Figure 3, item 314); one or more client computers connected to said server computer via a global area network (Figure 3, whole figure) and one or more computer programs (i.e. computer program products having software that enables the computer to perform)(Col 16, lines 2-4) executed by one or more server computers (Figure 3, item 314) wherein said computer program further comprises computer instructions for (i.e. computer program products having software that enables the computer to perform)(Col 16, lines 2-4)

storing, retrieving, and searching for information (i.e. database such as inventor, mapping, bibliographic, corporate, entity and the like) (Rivette, Col 9, lines 37-67 and Col 10, lines 11-22) (Examiner notes that a database is a structured collection of records or data that is stored in a computer system. In order to retrieve and access information from this storage one must query the database to find and retrieve the information)

regarding said intellectual property (i.e. patents or patent database) (Figure 6, item 614) corresponding to a technology sector within a technology

exchange (i.e. reads on patents which contain numerous and various different individual and corporate technologies) ((Figure 6, item 621) in and from a database, storing, retrieving, and searching (i.e. database such as inventor, mapping, bibliographic, corporate, entity and the like) (Rivette, Col 9, lines 37-67 and Col 10, lines 11-22) (Examiner notes that a database is a structured collection of records or data that is stored in a computer system. In order to retrieve and access information from this storage one must query the database to find and retrieve the information)

problem solving solutions related to said intellectual property (i.e. intelligent agents) (Rivette, Col 24, line 41) (*Examiner notes that an intelligent agent is used for intelligent actors which observe and act upon an environment, in the sense of a rational agent, an entity that is capable of perception, action and goal directed behavior. Such an agent might be a robot or an embedded real time software system - and is intelligent if it interacts with its environment in a manner that would normally be regarded as intelligent if that interaction were carried out by a human being. Also, an intelligent agent might be wholly autonomous, carrying out its own agenda, and acting as an agent for no one.*), in and from a database, storing, retrieving, and searching (i.e. database such as inventor, mapping, bibliographic, corporate, entity and the like) (Rivette, Col 9, lines 37-67 and Col 10, lines 11-22) (Examiner notes that a database is a structured collection of records or data that is stored in a computer system. In

Art Unit: 2617

order to retrieve and access information from this storage one must query the database to find and retrieve the information)

scientific and engineering publications (i.e. databases such as inventors or corporate entities which contain research and development such as different technologies) (Rivette, Col 14, lines 39-44) (Rivette, Col 17, lines 61-65) or (non-patent information) (Rivette, Col 14, line 9-13) related to said intellectual property (i.e. patent information) (Rivette, Col 14, lines 39-40) in and from a database (i.e. patent database) (Rivette, Figure 6, item 614);

allowing for searching, retrieving, and storing into and from said database or databases information regarding (i.e. databases such as inventors or corporate entities which contain research and development) (Rivette, Col 14, lines 39-44) (Rivette, Col 17, lines 61-65) or (non-patent information) (Rivette, Col 14, line 9-13) said intellectual property (i.e. patent information) (Rivette, Col 14, lines 39-40)

within said technology exchange (i.e. see below technologies such as pharmaceutical, or generating compounds, chemical, bioactive, robotically generated and the like)(Rivette, Figure 40, whole Figure)

FIG.40

Art Unit: 2617

said problem solving (i.e. intelligent agents) (Rivette, Col 24, line 41) (*Examiner notes that an intelligent agent is used for intelligent actors which observe and act upon an environment, in the sense of a rational agent, an entity that is capable of perception, action and goal directed behavior. Such an agent might be a robot or an embedded real time software system - and is intelligent if it interacts with its environment in a manner that would normally be regarded as intelligent if that interaction were carried out by a human being. Also, an intelligent agent might be wholly autonomous, carrying out its own agenda, and acting as an agent for no one.*), database (i.e. databases such as inventors or corporate entities which contain research and development) (Rivette, Col 14, lines 39-44) (Rivette, Col 17, lines 61-65) or (non-patent information) (Rivette, Col 14, line 9-13), and said science and engineering database (i.e. patent information database) (Rivette, Figure 6, item 614) (Rivette, Col 14, lines 39-40), and valuing said intellectual property (i.e. patent's value) (Rivette, Col 11, line 66) according to one or more search criteria specified by a user (i.e. inventor databases, and corporate entity databases, the financial databases, the person databases, and the employee databases. Such information includes R&D (research and development) information, financial information, licensing information, manufacturing information, HR (human resources) information, and any other information that may be pertinent to the analysis of the customer's patents and other relevant documents. (Rivette, Col 17, lines 62-67 to Col 18, lines 1-2) (*Examiner notes that with all these databases, a user can search such criteria according to finances, corporate, inventor, research and development or the like).*

Rivette does not expressly teach model mapping.

Boyack teaches model mapping (i.e. map of specific intellectual property) (Section 4. Application to Patent Data) and (Figure 1, "Landscape of patent class 360) and (i.e. analysis and mapping of patent data) (Introduction).

It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to modify the teachings of Rivette with the teachings of Boyack to include model mapping with the motivation to allow for powerful and flexible tools for exploring data collections, by providing access to the data in an intuitive visual format, and easy to interpret. By presenting data as a landscape, this allows for very large data sets to be represented in a memorable way. (Boyack et al., Introduction).

Regarding Claim 19, Rivette does not expressly model mapping includes topographical features optionally including colors, numbers, or symbols representing intellectual property value and direction of increasing and decreasing value of said intellectual property.

Boyack teaches model mapping includes topographical features (i.e. landscape maps such as contour maps like display in which color represents density) (Boyack, 2.3 Visualization Tools) optionally including colors, numbers,

or symbols representing intellectual property value and direction of increasing and decreasing value (i.e. contours of highs and lows representing patent class significance by technology companies such as Sony, shown in yellow or Seagate shown in red) (Figure 1) of said intellectual property (i.e. patent class 360) (Figure 1) see also (Figure 5 for landscape map of all patents issued in January 2000 where the map shows technologies such as networks, vehicle control, film, and the like).

It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to modify the teachings of Rivette with the teachings of Boyack to include model mapping includes topographical features optionally including colors, numbers, or symbols representing intellectual property value and direction of increasing and decreasing value of said intellectual property with the motivation to allow for powerful and flexible tools for exploring data collections, by providing access to the data in an intuitive visual format, and easy to interpret. By presenting data as a landscape, this allows for very large data sets to be represented in a memorable way. (Boyack et al., Introduction).

Regarding Claim 20, the rejection of claims 12 and 19 respectively, are fully incorporated and are similarly rejected along the same rationale. In addition, Rivette teaches for enabling optional simultaneous and instantaneous real-time or optional simultaneous or optional instantaneous real-time review of data (i.e.

corporations do not conduct such patent searches. One significant reason for this is the difficulty in identifying relevant patents, and the difficulty in analyzing patents. Computerized search tools are becoming available to the public, such as web sites on the Internet that can be used to conduct patent searches) (Rivette, Col 1, lines 56-62) (Examiner notes that the Internet is a series of interconnected computer networks that transmit data. The Internet is a "network of networks" that consists of millions of smaller domestic, academic, business, and government networks, which together carry various information and services, such as electronic mail, online chat or file transfer, and the interlinked web pages and other resources of the World Wide Web (WWW). A user views web pages that may contain text, images, videos, and other multimedia and navigates between them using hyperlinks. The Internet provides for optional instantaneous real-time viewing of data.) patent shoe (i.e. patents in shoes) (Rivette, Col 125, line 65) , by means of an audio or visual or audiovisual display, in a meaningful manner, at least (i.e. document databases 612 may be text, images, graphics, audio, video,multimedia and/or any other information representation that can be stored in electronic form.) (Rivette, Col 20, lines 18-21) a list of patents (i.e. patent database 614 includes electronic representation of U.S. and foreign patents of interest to the customer) (Rivette, Col 18, lines 22-28) causing, pursuant to a command to view or hear a next file (i.e. images, graphics, audio, video, multimedia and/or any other information representation)(Rivette, Col 20, lines 18-21), audible or visual display of image (Rivette, Col 20, lines 18-21) or

Art Unit: 2617

text data or both image (Rivette, Figure 40) causing, pursuant to a command to view a previous file (i.e. Figure 41 is a new view of a previous file)

[57]	<p>Attorney, Agent, or Firm—Stern, Kessler, Goldstein & Fox</p> <p>ABSTRACT</p> <p>A mechanism for defining a write protect state of a data storage media enclosed in a housing of a data storage element is disclosed. The mechanism includes an aperture formed in an exterior surface of the housing, wherein the aperture has a first region and a second region. A member is movably secured within the aperture and is manually movable between a first position wherein the member is positioned proximate the aperture first region, and a second position wherein the member is positioned proximate the aperture second region. A first human intelligible mark is placed on the housing proximate the aperture first region. The first human intelligible mark depicts a portion of a predetermined symbol corresponding to one of a write enabled state and a write protect state of the data storage media. A second human intelligible mark is placed on the member. The second human intelligible mark depicts a remaining portion of the symbol. The second human intelligible mark is alignable with the first human intelligible mark by moving the member into the first position. When the first and second human intelligible marks are aligned, the first and second human intelligible marks depict an unbroken image of the symbol, thereby indicating that the data storage media is in the one of the write enabled state and the write protect state. When the first and second human intelligible marks are not aligned, the first and second human intelligible marks depict a broken image of the symbol, thereby indicating that the data storage media is in another of the write enabled state and the write protect state of the data storage media.</p>

FIG. 41

Art Unit: 2617

allowing a user to scroll back and forth with no limitations and to provide reports capture any desired portion of said visual displays (i.e. user view patents in the document pane by horizontal scroll and sideways scroll in the document pane) (Rivette, Col 114, lines 30-40).

Regarding Claims 13-18 and 21-22, these claims are rejected respectively, are fully incorporated and are similarly rejected along the same rationale as the claims above. (Note: Examiner could not further conduct an appropriate search. See rejection under 35 USC 112).

It is noted that any citations to specific, pages, columns, lines, or figures in the prior art references and any interpretation of the references should not be considered to be limiting in any way. A reference is relevant for all it contains and may be relied upon for all that it would have reasonably suggested to one having ordinary skill in the art. See, MPEP 2123.

Related Prior Art Made of Record

Kenneth E. Edgecombe et al. (US Patent No. 6,345,235 filed on 9-19-1997, issued February 5, 2002) teaches multi-dimensional topology for acquiring relative values for density (scalar properties) of a volume for determining the multi-dimensional topology of a substance (system) within a volume (space), by acquiring a set of relative values for the density (scalar

Art Unit: 2617

properties) of the volume, each value for a given location (point) within the volume; interpolating a set of functions to generate a continuous relative density for the volume; identifying critical points of the continuous relative density by using an eigenvector, and associating critical points with one another by following a gradient path of the continuous relative density between the critical points.

The method is applicable to a wide range of data relating to fields such as crystallography, fluid dynamics, edge detection, and financial markets, to determine the topology of structures contained therein..

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Diane D. Mizrahi whose telephone number is 571-272-4079. The examiner can normally be reached on Monday-Thursday (9:30 - 4:30 p.m.).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nick Corsaro can be reached on (571) 272-7876. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications and (703) 305-3900 for After Final communication.

Art Unit: 2617

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).
